Adult Health- RSS™ feline dry and wet diets are palatable maintenance diets which include ingredients that have been selected to support urinary tract health. The diets have undergone RSS (relative supersaturation) analyses at an independent laboratory to support their use in prevention and treatment of struvite and calcium oxalate urolithiasis. Both diets contain pork, a palatable and digestible source of protein that is low in ash and phosphorus\(^1\). Potato is a highly digestible and low fibre carbohydrate source that contains high levels of antioxidants\(^2\). These multi-indication maintenance diets achieve appropriate urinary tract health parameters while containing moderate amounts of sodium\(^3,4\) and providing a low phosphorus content appropriate for use in early renal disease.

Dry: 2kg & 4kg
Wet: 100 g

Features:
- RSS data for treatment and prevention of struvite and calcium oxalate urolithiasis\(^5,6,7\)
- Excellent palatability
- High quality protein – preserves lean body mass
- High digestibility
- Limited in carbohydrates - wet formula
- Moderate sodium content - both diets
- Low phosphorus content – both diets

Therapeutic Indications:
- Adult health maintenance
- Dissolution and aid in prevention of struvite uroliths\(^5,8,9\)
- Aid in prevention of calcium oxalate uroliths\(^10,11,12\)
- IRIS stage 1 and 2 non-proteinuric renal disease (both formulas)\(^13,14,15,16\)
- Diabetic cats (BCS 5/9 or less) with historical/ concurrent urolithiasis (wet formula)\(^17,18\)

INGREDIENTS (DRY):
Pork, dried potatoes, potato protein, potato flour, pork meal, dried pork liver, chicken fat (preserved with mixed tocopherols), natural flavor, tomato pomace, tapioca starch, salmon oil (preserved with mixed tocopherols), salt, calcium chloride, fructooligosaccharides, choline chloride, vitamins (vitamin E supplement, niacin, vitamin B12 supplement, vitamin A acetate, thiamine mononitrate, pyridoxine hydrochloride, riboflavin, d-calcium pantothenate, vitamin D3 supplement, biotin, folic acid), taurine, potassium citrate, minerals (ferrous sulfate, zinc oxide, manganous oxide, copper sulfate, iron amino acid chelate, zinc amino acid chelate, manganese amino acid chelate, copper amino acid chelate, sodium selenite, cobalt carbonate, ethylenediamine dihydriodine), mixed tocopherols, rosemary extract.
NUTRITIONAL DETAILS (Calculated **) & AMOUNT/CUP:
Dry (2kg & 4kg)
410 kcals/cup; 1 cup = 115 grams

ME: 3561 kcal/kg % as is; 3871 kcal/kg % dry weight
Approximate g/cup: 115, kcal/cup = 410

Percentage of Metabolizable Energy from:
Protein 33.5 %
Fat 31.4 %
CHO-NFE 35.1 %

INGREDIENTS (WET):
Pork broth, pork, pork liver, dried egg white, potato starch, sunflower oil, guar gum, glycine, calcium sulfate, dextrose, vitamins and minerals (choline chloride, magnesium oxide, zinc amino acid complex, vitamin e supplement, iron amino acid complex, thiamine mononitrate, niacin, manganese amino acid complex, copper amino acid complex, vitamin a supplement, pyridoxine hydrochloride, d-calcium pantothenate, riboflavin, sodium selenite, folic acid, vitamin b12 supplement, calcium iodate, vitamin D3 supplement, biotin), fish oil, sea salt, fructooligosaccharides, potassium chloride, taurine.

NUTRITIONAL DETAILS (Calculated **) & AMOUNT/TRAY:
Wet (100g pate)

ME: 930 kcal/kg % as is; 4393 kcal/kg % dry weight
Approximate kcal/tray = 93

Percentage of Metabolizable Energy from:
Protein 42.7 %
Fat 41.3 %
CHO-NFE 16 %
CHO-NFE: 45.81%
**Carbohydrate Nitrogen Free Extract = CHO-NFE**

*Omega-3 fatty acids: eicosapentaenoic acid/docosahexaenoic acid/docosapentaenoic acid*

**The values listed represent calculated numbers and are based on thorough analysis of diet ingredients; some lot to lot variation due to ingredient related factors is expected. Strict attention to nutrients of clinical concern is upheld with quality assurance analyses prior to product release.**

**FEEDING GUIDELINES**

- Always follow your veterinarian’s instructions, as feeding amounts can vary by as much as 50% between cats^19,20^.
- Avoid free feeding of either wet or dry food (unless there is a specific medical reason); it may promote obesity over time^21^.
- The tables below can be used to estimate the amount to feed using the cat’s optimum weight.
- Always introduce new foods gradually over 5-7 days by substituting larger amounts of the new food in place of the old diet.

**DRY:**

Feeding guidelines are from the AAHA 2010 Nutritional Assessment Guidelines for Dogs and Cats. The above tables should be used as a starting guideline and the actual amounts fed may need to be increased or decreased based on each cat’s individual energy requirement. Energy requirements will vary depending upon such factors as age, breed, gender and neuter status, activity level, and underlying disease state.

**NUTRITIONAL ADEQUACY STATEMENT**

These diets have been formulated to meet the Association of American Feed Control Officials (AAFCO) nutrient requirements for maintenance of adult cats.

**RESEARCH & DEVELOPMENT TRIALS**

Palatability tests and Relative Super Saturation (RSS) for struvite and calcium oxalate have been completed on the Adult Health-RSS.

**HELP**

For veterinarians or clinic staff wanting to discuss individualized patient recommendations, obtain additional diet information or specific values, or any other questions, please call or email for a consult. One of the Rayne clinical consult team members will be pleased to communicate with you: consults@raynenutrition.com
